### Definition of specialty medications:

Specialty medications are generally prescribed for people with complex or ongoing medical conditions such as multiple sclerosis, hemophilia, hepatitis C and rheumatoid arthritis. These high cost medications also have one or more of the following characteristics: injected or infused, but some may be taken by mouth; unique storage or shipment requirements; additional education and support required from a health care professional; and usually not stocked at retail pharmacies.

**Note:** In order for a member to receive in-network benefits for the following specialty drugs, the specialty pharmacy filling the claim must contract with the Blue Cross and Blue Shield Plan where the physician is located. Blue Cross and Blue Shield of Alabama in-network specialty pharmacies are: Accredo Health Group, Inc. (1-888-608-9030), CVS/Caremark (1-800-237-7761) and Prime Therapeutics Specialty Pharmacy (1-877-627-6337).

### Autoimmune
